

HIV/AIDS IN SWAZILAND: A BIBLIOGRAPHY

Compiled by Zipho G. Ngcobo, Ncamsile N. Dlamini, and Nokuphila R. Saulus

INTRODUCTION

Although the first AIDS case in Swaziland was reported in 1987(WHO, 2005), the country is one of those that have been severely affected by the pandemic which continues to be a major challenge to human development. As a response to this pandemic, institutions and organisations such as, government through the Ministry of Health, National Emergency Response Council on HIV and AIDS (NERCHA), Alliance of Mayors Initiative for Community Action on AIDS at Local (AMICAAL), Non Governmental Organisations, The AIDS Information and Support Centre (TASC), Family Life Association of Swaziland (FLAS), churches, cultural structures, and many others have joined forces in working towards stemming the pandemic because it is everybody's concern – “indzaba yetfu sonkhe”. This concern has included several strategies regarding prevention, education, health promotion, care and support.

Conducting research on the subject has been one of the strategies. We have observed that there has been a growing body of literature on HIV/ AIDS in Swaziland, however, this information is scattered in different sources. There is lack of a comprehensive list on what has been written on the subject. This bibliography, although not exhaustive is an attempt to pull together and make accessible what has been published on HIV/AIDS in Swaziland. Several databases were searched and approximately three hundred items were identified to cover journal articles, conference papers, policy papers, reports, thesis and dissertations.

This is the first phase of the project and provides an alphabetical listing of publications on the subject. We hope that this bibliography will support and promote further research and work on HIV/AIDS in Swaziland.

ADLER, M. R. and Church, K.

Limitations and implications of generalizations made regarding horizontal HIV transmission in Swaziland. **International Journal of STD & AIDS**, 2011, 22(2):117-8.
