

**UNIVERSITY OF SWAZILAND**

**SUPPLEMENTARY EXAMINATION PAPER**

**PROGRAMME:** DIPLOMA IN AGRICULTURE  
DIPLOMA IN AGRIC EDUCATION  
DIPLOMA IN HOME ECONOMICS  
DIPLOMA IN HOME ECONOMICS EDUCATION  
REMEDIAL AGRICULTURE

**COURSE CODE:** AEM 201

**TITLE OF PAPER:** ELEMENTARY STATISTICS

**TIME ALLOWED:** TWO (2) HOURS

**REQUIREMENTS:** CALCULATOR, STATISTICAL TABLES AND  
GRAPH PAPER

**INSTRUCTION:** ANSWER QUESTION ONE AND ANY OTHER  
TWO QUESTIONS

**DO NOT OPEN THIS PAPER UNTIL PERMISSION HAS BEEN  
GRANTED BY THE CHIEF INVIGILATOR**

**QUESTION 1**

- a) Following is the class frequency distribution of the data on birth weight of some babies;

Classes	Frequency f
60.5-80.5	9
80.5-100.5	20
100.5-120.5	25
120.5-140.5	37
140.5-160.5	8
<b>Total</b>	<b>99</b>

Compute (approximate) mean, variance and the standard deviation of the birth weight. Calculate the coefficient of skewness and make a comment on the distribution of the data.

(20)

- b) EFG Sugar Mills employs 72,000 people in its local operations. The Human Resources Director is eager to compare the distribution of salaries within the company with those in other companies operating in the country.

**Distribution of salaries in EFG Sugar Mills, year ending  
31 December 2002**

Salary	Number of employees
Under E10,000	6200
E10, 000 but under E15, 000	12000
E15, 000 but under E20, 000	15600
E20, 000 but under E25, 000	14200
E25, 000 but under E30, 000	11900
E30, 000 but under E40, 000	7000
E40, 000 but under E50, 000	3500
E50, 000 but under E100, 000	1500
E10,000 or more	100
<b>Total</b>	<b>72000</b>

**QUESTION 1 (Cont.)**

- i) Estimate, by calculation, the median, and the inter- quartile range of this distribution.

(10)

- ii) The corresponding values for the country sugar industry as a whole are as follows:

Median: E23,200

Upper Quartile: E32,300

Lower Quartile: E15,700

Comment briefly on the similarities and differences between the data for the country as a whole and your calculations for EFG Sugar Mills. Suggest how they might have arisen.

(5)

- iii) Explain why it may be preferable to use the median, quartiles and percentiles for describing the location and dispersion of this distribution, rather than the mean and the standard deviation.

(5)

**QUESTION 2**

A Elementary statistics lecturer conducted a study to investigate the relationship between performance of his students on exams and their anxiety. Ten students from his class were selected for the experiment. Just prior to taking the final exam, the 10 students were given an anxiety questionnaire. Here are final exam and anxiety scores for the 10 students:

Student	1	2	3	4	5	6	7	8	9	10		
Anxiety			28	41	35	39	31	42	50	46	45	37
Final exam	82	58	63	89	92	64	55	70	51	72		

- a) Determine the strength of the relationship between exam scores and anxiety. (8)
- b) Construct a regression equation for predicting the dependent variable, and calculate the standard error. (12)

**QUESTION 3**

- a) Explain the meaning of the following statistical terms used in hypothesis tests.

- (i) Type I error. (2)
- (ii) Type II error. (2)
- (iii) Level of significance. (2)

- b) A farmer wishes to investigate whether the inclusion of a chicken food additive would affect the number of eggs laid by his chickens. To examine the impact of the food additive, the farmer selected a random sample of 24 chickens, all of similar age, and randomly allocated 12 to receive the normal food for three weeks and 12 to receive the normal food together with the food additive for three weeks. The number of eggs laid by each chicken during this period was recorded as follows.

**QUESTION 3 (Cont)**

<i>Normal food only</i>	<i>Normal food and additive</i>
9	18
16	17
13	15
11	14
14	17
18	16
14	14
12	11
12	13
15	18
14	16
12	15

Using an appropriate statistical test, investigate whether the inclusion of the food additive in the diet has any effect on the number of eggs laid by the chickens. (14)

**QUESTION 4**

An insurance company classifies drivers in the agricultural manufacturing sector according to sex and to whether they are under 25 or 25 years and over. It finds that 60% of its drivers are male; 25% of the male drivers and 30% of the female drivers are under 25.

- a) Find the probabilities that a randomly chosen driver is in each of the four categories
  - i) male and under 25,
  - ii) male and 25 or over,
  - iii) female and under 25,
  - iv) female and 25 or over.

(6)
  
- b) Hence write down the probabilities of a driver being
  - i) under 25,
  - ii) male given that the driver is under 25,
  - iii) male or under 25 (or both),
  - iv) neither male nor under 25.

(6)

**QUESTION 3 (Cont)**

<i>Normal food only</i>	<i>Normal food and additive</i>
9	18
16	17
13	15
11	14
14	17
18	16
14	14
12	11
12	13
15	18
14	16
12	15

Using an appropriate statistical test, investigate whether the inclusion of the food additive in the diet has any effect on the number of eggs laid by the chickens.

(14)

**QUESTION 4**

An insurance company classifies drivers in the agricultural manufacturing sector according to sex and to whether they are under 25 or 25 years and over. It finds that 60% of its drivers are male; 25% of the male drivers and 30% of the female drivers are under 25.

a) Find the probabilities that a randomly chosen driver is in each of the four categories

- i) male and under 25,
- ii) male and 25 or over,
- iii) female and under 25,
- iv) female and 25 or over.

(6)

b) Hence write down the probabilities of a driver being

- i) under 25,
- ii) male given that the driver is under 25,
- iii) male or under 25 (or both),
- iv) neither male nor under 25.

(6)

- c) The probability  $p$  of having at least one accident in a year is given in the table for the different classes of drivers whose distribution is as above.

**Probability  $p$  of one or more accidents for different classes of driver**

	<i>under 25</i>	<i>25 or over</i>
<i>male</i>	0.09	0.04
<i>female</i>	0.06	0.02

- i) Find the probability that a randomly chosen driver has at least one accident in a year.
- ii) If a driver has at least one accident what is the probability that the driver is male and under 25?

(8)

TABLE A.5\*  
Critical Values of the  $t$  Distribution

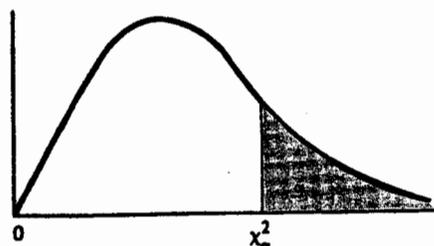

$\nu$	$\alpha$				
	0.10	0.05	0.025	0.01	0.005

### Confidence Intervals

Parameter	Assumptions	Endpoints
$\mu$	$N(\mu, \sigma^2)$ or $n$ large $\sigma^2$ known	$\bar{x} \pm z_{\alpha/2} \frac{\sigma}{\sqrt{n}}$
$\mu$	$N(\mu, \sigma^2)$ $\sigma^2$ unknown	$\bar{x} \pm t_{\alpha/2, (n-1)} \frac{s}{\sqrt{n}}$
$\mu_x - \mu_y$	$N(\mu_x, \sigma_x^2)$ $N(\mu_y, \sigma_y^2)$ $\sigma_x^2, \sigma_y^2$ known	$\bar{x} - \bar{y} \pm z_{\alpha/2} \sqrt{\frac{\sigma_x^2}{n} + \frac{\sigma_y^2}{m}}$
$\mu_x - \mu_y$	Variances unknown, large samples	$\bar{x} - \bar{y} \pm z_{\alpha/2} \sqrt{\frac{s_x^2}{n} + \frac{s_y^2}{m}}$
$\mu_x - \mu_y$	$N(\mu_x, \sigma_x^2)$ $N(\mu_y, \sigma_y^2)$ $\sigma_x^2 = \sigma_y^2$ , unknown	$\bar{x} - \bar{y} \pm t_{\alpha/2, (n+m-2)} s_p \sqrt{\frac{1}{n} + \frac{1}{m}}$ $s_p = \sqrt{\frac{(n-1)s_x^2 + (m-1)s_y^2}{n+m-2}}$
$\mu_0 = \mu_x - \mu_y$	$X$ and $Y$ normal, but dependent	$\bar{d} \pm t_{\alpha/2, (n-1)} \frac{s_d}{\sqrt{n}}$
$\sigma^2$	$N(\mu, \sigma^2)$	$\frac{(n-1)s^2}{\chi^2_{\alpha/2, (n-1)}}, \chi^2_{1-\alpha/2, (n-1)}$
$\frac{\sigma_x^2}{\sigma_y^2}$	$N(\mu_x, \sigma_x^2)$ $N(\mu_y, \sigma_y^2)$	$\frac{s_x^2/s_y^2}{F_{\alpha/2, (n-1), m-1}}, F_{\alpha/2, (m-1, n-1)}$
$p$	$b(n, p)$ $n$ is large	$\frac{y}{n} \pm z_{\alpha/2} \sqrt{\frac{(y/n)(1-y/n)}{n}}$
$p_1 - p_2$	$b(n_1, p_1)$ $b(n_2, p_2)$	$\hat{p}_1 - \hat{p}_2 \pm z_{\alpha/2} \sqrt{\frac{\hat{p}_1(1-\hat{p}_1)}{n_1} + \frac{\hat{p}_2(1-\hat{p}_2)}{n_2}}$ $\hat{p}_1 = y_1/n_1, \hat{p}_2 = y_2/n_2$

### Tests of Hypotheses

Hypotheses	Critical Region
$H_0: \mu = \mu_0$ $H_1: \mu > \mu_0$ $\sigma^2$ known	$z = \frac{\bar{x} - \mu_0}{\sigma/\sqrt{n}} \geq z_{\alpha}$
$H_0: \mu = \mu_0$ $H_1: \mu > \mu_0$ $\sigma^2$ unknown	$z = \frac{\bar{x} - \mu_0}{s/\sqrt{n}} \geq t_{\alpha, (n-1)}$
$H_0: \mu_x - \mu_y = 0$ $H_1: \mu_x - \mu_y > 0$ $\sigma_x^2, \sigma_y^2$ known	$z = \frac{\bar{x} - \bar{y} - 0}{\sqrt{\frac{\sigma_x^2}{n} + \frac{\sigma_y^2}{m}}} \geq z_{\alpha}$
$H_0: \mu_x - \mu_y = 0$ $H_1: \mu_x - \mu_y > 0$ Variances unknown, large samples	$z = \frac{\bar{x} - \bar{y} - 0}{\sqrt{\frac{s_x^2}{n} + \frac{s_y^2}{m}}} \geq z_{\alpha}$
$H_0: \mu_x - \mu_y = 0$ $H_1: \mu_x - \mu_y > 0$ $\sigma_x^2 = \sigma_y^2$ , unknown	$t = \frac{\bar{x} - \bar{y} - 0}{s_p \sqrt{1/n + 1/m}} \geq t_{\alpha, (n+m-2)}$ $s_p = \sqrt{\frac{(n-1)s_x^2 + (m-1)s_y^2}{n+m-2}}$
$H_0: \mu_0 = 0$ $H_1: \mu_0 > 0$	$t = \frac{\bar{d} - 0}{s_d/\sqrt{n}} \geq t_{\alpha, (n-1)}$
$H_0: \sigma^2 = \sigma_0^2$ $H_1: \sigma^2 > \sigma_0^2$	$\chi^2 = \frac{(n-1)s^2}{\sigma_0^2} \geq \chi^2_{\alpha, (n-1)}$
$H_0: \sigma_x^2/\sigma_y^2 = 1$ $H_1: \sigma_x^2/\sigma_y^2 > 1$	$F = \frac{s_x^2}{s_y^2} \geq F_{\alpha, (n-1, m-1)}$
$H_0: p = p_0$ $H_1: p > p_0$	$z = \frac{y/n - p_0}{\sqrt{p_0(1-p_0)/n}} \geq z_{\alpha}$
$H_0: p_1 - p_2 = 0$ $H_1: p_1 - p_2 > 0$	$z = \frac{y_1/n_1 - y_2/n_2 - 0}{\sqrt{\frac{(y_1/n_1)(1-y_1/n_1)}{n_1} + \frac{(y_2/n_2)(1-y_2/n_2)}{n_2}}} \geq z_{\alpha}$
