PAGE 1 OF 8

1ST SEM. 2018/19

#### UNIVERSITY OF ESWATINI

PROGRAMME:

BACHELOR OF SCIENCE IN FOOD SCIENCE, NUTRITION, AND

TECHNOLOGY;

BACHELOR OF SCIENCE IN CONSUMER SCIENCE;

BACHELOR OF SCIENCE IN CONSUMER SCIENCE EDUCATION.

**COURSE CODE:** 

**FNS205** 

TITLE OF PAPER: FOOD SCIENCE

TIME ALLOWED:

TWO (2) HOURS

**INTRUCTIONS:** 

ANSWER QUESTION ONE (1) AND ANY OTHER TWO (2)

QUESTIONS.

DO NOT OPEN THIS PAPER UNTIL PERMISSION HAS BEEN GRANTED BY THE CHIEF INVIGILATOR.

### **QUESTION 1 (COMPULSORY)**

THERE IS ONLY ONE CORRECT ANSWER PER QUESTION. CHOOSE THE CORRECT ANSWER AND WRITE THE QUESTION NUMBER AND YOUR ANSWER CHOICE ON THE ANSWER SHEET. For example, if the answer for number 1 is "a" then you should write "1. a" on your answer sheet.

1. Fats an	nd oils are co	nstructed of bu	uilding blocks	called "trig	glycerides" r	esulting from	the:

- a. Combination of one unit of glycerol and three units of fatty acids
- b. Combination of three units of glycerol and one unit of fatty acids
- c. Combination of one unit of fat and three units of oils
- d. b and c
- e. All of the above
- 2. A saturated fatty acid contains:
  - a. 2-12 double bonds
  - b. No double bonds
  - c. One double bond
  - d. a and c
  - e. None of the above
- 3. Disaccharides consist of two monosaccharide units joined together. They include:
  - a. Lactose, maltose, glucose,
  - b. Lactose, maltose, galactose
  - c. Lactose, maltose, sucrose
  - d. Lactose, maltose, fructose
  - e. All of the above
- 4. A carbohydrate with an aldehyde as its carbonyl unit is called an (a):
  - a. Ketose
  - b. Aldehyde
  - c. Ketone
  - d. a and c
  - e. Aldose
- 5. When a hydroxyl reacts with a hydroxyl on another monosaccharide, a \_\_\_\_\_\_\_
  - a. Glycosidic bond breaks
  - b. Hydrolysis bond forms
  - c. a only
  - d. Glycosidic bond forms
  - e. All of the above
- 6. Starch is a mixture of:
  - a. 2% amylose and 8% amylopectin
  - b. 80% amylose and 20% amylopectin

PAGE 3 OF 8 FNS205 (M)

	c 20% amulo	se and 80% amylopectin.
	d. All of the al	nove
	e. None of the	
	or from or the	above
7.	is a pr	ocess whereby the hydrophilic groups in the starch molecule start
		up moisture, when the granule is suspended in water.
	a. Retrograda	tion
	b. Emulsificat	
	c. Condensati	
	d. Gelatinizati	
	e. None of the	above
8.		are found universally in the primary cell well and internal
	in plants.	are found universally in the primary cell wall and intercellura layers
	a. Gums or gu	m substances
		ectin substances ,
	c. Hydrocollo	
	d. a and b	
	e. All of the al	oove
9. 7	The amino acids in a	polymer chain are joined together by the between the
car	rboxyl and amino gro	oups of adjacent amino acid residues.
	a. Glycosidc bo	nds
	b. Peptide bonds	
	c. Carbon bond	S
	d. Polimer bone	
	e. All of the abo	ve
10	)	
stri	ructure (hydrogen h	s because the bonding interactions responsible for the secondary
	a. Denaturation	onds to amides) and tertiary structure are disrupted.
	b. Synthesis	
	c. Retrodegrada	ation
	d. Foaming	
	e. Emulsificatio	n
11.	are a	group of complex organic compound, generally required in the diet
n s	Sman amounts for in	ormal growth and maintenance of health.
	a. Emulsifiers	
	b. Enzymes	
	c. Organic acid	
	d. All of the ab	ove
	e. Vitamins	

### PAGE 4 OF 8 FNS205 (M)

12	are biological catalysts that promote a wide variety of biochemical
reactions.	
a. Emi	ulsifiers
b. Enz	ymes
c. Org	anic acids
d. All	of the above
e. Vit	amins
13	foods are by far the major source of energy, protein, B vitamins, and
	he world population.
a. Fat-b	pased
b. Prote	ein-based
c. Cerea	al-based
d. a and	d b
e. All of	f the above
14. The loss o	of vitamins in cooking may come from destruction by heat or byas
	the discarded cooking water.
	Degradation
	Preparation
	Precipitation
	Oxidation
	None of the above
15. Meat tend	erizes during storage as a result of the action ofon the tissues.
	Proteolytic enzymes
	Denaturation enzymes
	Pectinase enzymes
	b and c
e.	All of the above
16i	is a complex mixture of lipids, carbohydrates, proteins and other organic and
inorganic acid	ds dispersed in water.
a.	Tea
b.	Yoghurt
	Coffee
d.	Juice
	Milk

PAGE 5 OF 8 FNS205 (M)

this reaction occurs when sugars are treated under anhydrous condition at high concentration with dilute acid.  Browning
Browning
C
Caramelization
Oxidation
Reduction
None of the above
ges that occur to meat during cooking include:
Protein denaturation
Caramelization
Maillard reactions
All of the above
None of the above
_ can be defines as "any ready-to-eat food that will support the growth of
pacteria easily and does not require any further heat treatment or cooking"
Medium-risk foods
Low-risk foods
High-risk foods
No-risk foods
All of the above
soning, also called foodborne illness, is any illness caused by eating
or and the about the inness, is any liness caused by eating
Dirty food
Toxic food
Spoiled
Contaminated
All of the above
(20x2=40 Marks)

# **QUESTION 2**

Instructions: Fill-in the correct word(s) and select the correct response to the following statements.

1.	Knowledge o	of food constituents and their properties is the centre of food science.
	a. True	b. False
2.	Saturated fatt configuration double bonds a. True	cy acids can exist in either the cis or trans form depending on the of the hydrogen atoms attached to the carbon atoms joined by the b. False
3.	In a hazard ar measures you	nalysis, you identify any food safety hazards and the preventive can use to control the hazards.
	a. True	b. False
4.	Food hygiene from producti	is the conditions and measures necessary to ensure the safety of food ion to consumption.
	a. True	b. False
5.	Hydrogenatio semi-solid for	n was developed as a result of the need to: (1) convert liquid oils to m and (2) increase the oxidative and thermal stability of fat or oil.
	a. True	b. False
6.	biology) and e	is the application of the basic sciences (physics, chemistry and engineering to study the fundamental physical, chemical and ature of foods and the principles of food processing.
7.	generally orig	include sugars, starches, cellulose and other compounds that inate from plants which are a major class of food for most animals.
8.	Ordinary table through	e sugar, sucrose, C <sub>12</sub> H <sub>22</sub> O <sub>11</sub> is a disaccharide that can be broken up, , into the monosaccharides glucose and fructose.
9.	to make a larg	is a chemical process by which 2 molecules are joined together er, more complex, molecule, with the loss of water.

## PAGE 7 OF 8 FNS205 (M)

	nals have enzymes that hydrolyse starches to gluc	cose. There
are two enzymes kn	own as and	_ which are
involved in the hydr	olysis of starch.	
11 Amino acida in a sal	ymay shain and is in the	
hetween the carbon	ymer chain are joined together by	bonds
between the carboxy	yl and amino groups of adjacent amino acid residu	ies.
12. These are	soluble vitamins (B-complex and Vitam	
12. These are	soluble vitamins (A, D, E, K).	in C) and
	soluble vitalillis (A, D, E, K).	
13. r	reaction is widespread in foods and it is a chemica	al and an
biological reaction th	hat alters the appearance, flavour and nutritive va	u and or
0	nat arters the appearance, havour and nutritive va	ilue of 100a.
14. Fermentation is the	breakdown of food components by the action of	
	contained in microorganisms leading to chemical	and physical
changes in the food.		
15 }	prowning reaction is a biological reaction that take	es place in
many food materials	s like fruits and vegetables when their tissues are	subjected to
mechanical injury or	r exposed to due to cutting and peeling.	oubjected to

[TOTAL MARKS=30]

### **QUESTION 4**

- A. Discuss the application of protein functionality in foods, during:
- I. Emulsification
- II. Maillard browning

(2x4=8 Marks)

B. Discuss any FOUR factors affecting physical characteristics of fats and oils.

(4x4=16 Marks)

- C. Discuss the uses of enzymes during the following food processes:
  - I. Enzymes in bread making
  - II. Enzymes in cheese production
  - III. Meat tenderizing enzymes

(3x2=6 Marks)

[TOTAL MARKS=30]
