TITLE OF PAPER

**RESEARCH METHODS AND** 

**EVALUATION** 

**PROGRAMME** 

BED III

:

:

**COURSE NUMBER** 

**EDF 320 PAPER 1** 

TIME ALLOWED

THREE (3) HOURS

## **INSTRUCTIONS:**

1. This paper is in two parts.

2. Answer all items in section one by putting a circle around the correct response on the answer card provided.

- 3. You are advised not to spend more than 45 minutes in this section.
- 4. Answer question one, and any TWO other questions from Section B.
- 5. Answer cards, formula sheets and the necessary tables are also provided.

THIS PAPER IS NOT TO BE OPENED UNTIL PERMISSION TO DO SO, HAS BEEN GRANTED BY THE INVIGILATOR.

### **SECTION ONE**

INSTRUCTION: ANSWER ALL ITEMS IN THIS SECTION BY PUTTING A CIRCLE AROUND THE CORRECT RESPONSE ON THE ANSWER CARD PROVIDED.

### ITEM 1

A simple random sampling technique is one in which

- a. each member has a 100% chance of being included in the study sample
- b. alternate members of the population are included in the study sample
- c. everyone is included in the study sample
- d. the study is first stratified before the members of the study samples are selected.
- e. every member of the population has an equal chance of being included in the sample.

#### ITEM 2

In which research situation would the experiment be confounded?

- a. the dependent variable varies systematically with the independent variable
- b. the dependent variable fails to vary systematically with the independent variable.
- c. An extraneous variable varies systematically with the independent variable
- d. An extraneous variable fails to vary systematically with the independent variable.
- e. when the research is difficult.

### ITEM 3

The significance of a study should point out

- a. the population of the study
- b. the method used in data collection
- c. who will benefit from the study
- d. what data will be collected
- e. who will collect the data

### ITEM 4

What is the advantage of using the questionnaire in research?

- a. it is easy to construct
- b. it covers a wide geographical spread of the population sample
- c. it has a high response rate
- d. even those who cannot read can ask others to respond on their behalf
- e. you do not have to meet the person responding

An important reason for a literature review is to

- a. obtain primary and secondary information of the data
- b. determine the statistical significance of previous studies
- c. search for information about virgin areas that need to be researched
- d. all of the above
- e. none of the above

#### ITEM 6

Which of these are the characteristics of a one shot case study?

- a. ' the dependent variable is measured before event
- b. the dependent variable is measured only after the event
- c. the dependent variable is measured during the event
- d. the dependent variable is measured before, during and after the event
- e. no variable is measured at all

#### ITEM 7

Which activity is a component of research problem development and refinement?

- a. data collection
- b. instrument selection
- c. literature review
- d. qualitative data analysis
- e. questionnaire design

#### ITEM 8

When a researcher lives with a group of people to observe them, it is called

- a. nature observation
- b. behavioural observation
- c. participant observation
- d. subjective observation
- e. informal observation

#### ITEM 9

Which of the following is true of a positively skewed curve? The

- a. mean is always larger than the median and the mode
- b. mode is larger than the median
- c. mean is smaller than the mode
- d. mode is larger than the mean
- e. mode and the mean are always equal.

Which of these is an advantage of observation studies over experimental research?

- a. no experiment needed to be worked out
- b. more people are involved in the study
- c. the personal views of the observer are very important
- d. data are easy to quantify
- e. behaviour is recorded when it occurs

#### ITEM 11

What is the advantage of using questionnaires as compared to using interview for the same cost? With questionnaires the researcher can

- a. achieve a greater depth of information
- b. seek clarification of subjects' answers
- c. obtain a higher number of responses
- d. control the order in which subjects respond
- e. keep a record of responses by participants

### ITEM 12

Which is the first step to take in identifying a research topic?

- a. work out specific questions that the research should address
- b. identify a general area the research should focus on
- c. ask your supervisor to help you identify a research topic
- d. define the problem
- e. all of the above

## **ITEM 13**

"Going native" and "getting immersed" are phrases that are associated with

- a. historical research
- b. experimental research
- c. participatory research
- d. case study research
- e. descriptive research

A research proposal must possess one of the following

- a. a questionnaire
- b. a conclusion
- c. an interpretation
- d. significance of the study
- e. an analysis

#### **ITEM 15**

In which model of hypothesis formation is the accumulation of data used to form general explanatory principles?

- a. oral tradition
- b. correlational
- c. deductive
- d. inductive
- e. scientific

#### **ITEM 16**

In most research it is usual to draw conclusion(s) about a larger group from a smaller group or group(s). What is the term for the larger group?

- a. statistics
- b. variable
- c. population
- d. parameter
- e. sample

### **ITEM 17**

Which of these is true of the Ex post-factor research?

- a. the researcher is able to manipulate the independent variable
- b. the cause and effect factors are easy to differentiate
- c. there is always one cause factor
- d. the sample cannot be randomized
- e. the findings are easy to confirm

A researcher is evaluating a set of research findings. Why would the researcher want to replicate the findings? Replication will promote the

- a. interaction of the variables
- b. reactivity of the participants
- c. internal validity of the study
- d. external validity of the study
- e. the truth of results

# ANSWER QUESTIONS 19 TO 21 FROM THE INFORMATION STATED BELOW.

The following are scores for 10 pupils out of a possible 20 points in religious education:

12, 15, 9, 16, 8, 17, 6, 11, 17 and 13

## ITEM 19

The mean for the test is

- a. 11.7
- b. 12.4
- c. 15.2
- d. 9.0
- e. 13.3

### ITEM 20

What is the median for the distribution?

- a. 13
- b. 11.5
- c. 12
- d. 15.5
- e. 12.5

### ITEM 21

What is the mode of the distribution?

- a. 12
- b. 15
- c. 11
- d. 17
- e. none of the above

#### **QUESTION 22**

In cluster sampling, the unit of the sample is the

- a. individual research participant
- b. target population
- c. naturally occurring groups of individuals
- d. stratified proportion of the population
- e. accessible population

#### **ITEM 23**

What can be concluded about the cause and effect relationship between two variables that have a highly significant correlation?

- a. no conclusion can be drawn about the cause and effect relationship
- b. the cause and effect relationship is significant if the correlation is positive
- c. the cause and effect relationship is significant if the correlation is negative
- d. there is significant cause and effect relationship between the two variables
- e. predictions made are very reliable

#### ITEM 24

Which of these is a major weakness of basic research

- a. it has no immediate or planned application
- b. it is usually carried out with animals and therefore has little relevance for humans
- c. it is concerned with extending the boundaries of knowledge
- d. the sample is limited
- e. none of the above

#### **ITEM 25**

In research, a factor that is manipulated by the researcher is called

- a. independent variable
- b. dependent variable
- c. intervening variable
- d. constant variable
- e. measurable

### **ITEM 26**

A research method in which the investigation is done after the event has occurred is known as

- a. descriptive research
- b. experimental research
- c. correlational research
- d. ex post-factor research
- e. basic research

If the author of a book reports results of his own experiments, that portion of the text would be considered a

- a. primary source
- b. secondary source
- c. preliminary source
- d. literature review
- e. generalisation of findings

#### **ITEM 28**

One of the characteristics of the ex post-factor research is that data are collected

- a. before the event
- b. during the event
- c. after the event
- d. both before and after the event
- e. both before and during the event

## **SECTION TWO**

**INSTRUCTION:** 

(i) ANSWER QUESTION (1) ONE AND ANY 2 (TWO) OTHER QUESTIONS FROM THIS SECTION.

(ii) EACH QUESTION MUST BE ANSWERD IN A SEPARATE BOOKLET

## **QUESTION 1**

The following are two sets of test scores for 10 B.Ed students in philosophy of education and educational psychology out of a possible score of 20 marks.

| PHILOSOPHY | PSCHOLOGY                      |      |
|------------|--------------------------------|------|
| 10         | 3                              |      |
| 11         | 10                             |      |
| 10         | 9                              |      |
| 5          | 11                             |      |
| 9          | 7 3 marks for completing the t | able |
| 11         | 13                             |      |
| 12         | 14                             |      |
| 9          | 10                             |      |
| 13         | 13                             |      |
| 8          | 11                             |      |

- (i) Declare a null hypothesis and its alternative hypothesis for the situation.

  2 marks each = 4 marks
- (ii) Determine the relationship between the two variables, and test for significance at the 95% confidence level. 5 marks each = 10 marks
- (iii) What is the status of the null hypothesis? 4 marks
- (iv) Explain your result 4 marks

24 MARKS

## **QUESTION 2**

Choose one ex-post factor research problem.

| a. | briefly describe the problem                           | 8 marks |
|----|--|---------|
| b. | identify the sample                                    | 4 marks |
| C. | identify the independent variable                      | 4marks  |
| d. | identify the dependent variable, and                   | 4 marks |
| e. | describe any two (2) problems that you might encounter | 4 marks |

24 MARKS

## **QUESTION 3**

- (a) What are the main aims of science as a knowledge producing system? 12 marks
- (b) Outline science both as a cyclic process of reasoning and observation and as a social institution. 12 marks

24 MARKS

## **QUESTION 4**

Describe in a logical manner at least <u>four</u> common errors, which a researcher may encounter in the formulation of a problem.

4x8 marks

24 MARKS

SOURCE: APPENDIX C from Downie, N.M., and Heath, R.M. Basic Statistical Methods, N.Y.; Harper & Row, Publishers, 1974.

## APPENDIX B

# Areas for a Standard Normal Distribution

Entries in the table represent the area under the curve between x=0 and a positive value of x. Because of the symmetry of the curve, the area under the curve between x=0 and a negative value of x would be found in a like manner.

| z  | .00  | .01  | .02  | .03  | .04  | .05  | .06  | .07  | .08  | .09  |
|--|--|--|--|--|--|--|--|--|--|--|

## APPENIDIX B

## Areas for a Standard Normal Distribution

Entries in the table represent the area under the curve between z=0 and a positive value of z. Because of the symmetry of the curve, the area under the curve between z=0 and a negative value of z would be found in a like manner.

| , <b>z</b>   | .00   | .01  | .02  | .03  | .04  | .05  | .06  | .07  | .08  | .09  |
