

UNIVERSITY OF SWAZILAND

BACHELOR OF SCIENCE

SUPPLEMENTARY EXAMINATION 2014

TITLE OF PAPER : PHYSICAL CHEMISTRY

COURSE NUMBER : C202

TIME : 3 HOURS

INSTRUCTIONS : THERE ARE SIX QUESTIONS

: ANSWER ANY FOUR QUESTIONS

: BEGIN THE ANSWER TO EACH QUESTION ON  
A SEPARATE SHEET OF PAPER

: DATA SHEETS ARE PROVIDED WITH THIS  
EXAMINATION PAPER

DO NOT OPEN THIS PAPER UNTIL THE INVIGILATOR INSTRUCTS YOU TO DO  
SO.

**Question 1(25 marks)**

- a) Define the variable, compressibility factor,  $z$ . With the aid of Lennard-Jones potential plot, compressibility and isotherm plots, compare and contrast real and ideal gases.

Your account should make mention of interactions, equations and any necessary theories to help clarify your discussion.

[15]

- b) Write short notes **on any One** of the following:

- i) Virial equation [10]  
ii) van der waal's equation [10]

Use diagrams, equations or plots to clarify your notes where necessary.

**QUESTION 2 [25 marks]**

- a) A real gas equation of state for a gas is given by:

$$P = RT(V_m - \beta)^{-1} - (\alpha/T)V_m^{-2} \quad (1)$$

- (i) Derive an expression for  $V_{m,c}$ ,  $T_c$  and  $P_c$ . [12]  
(ii) Find an expression for the Boyle's temperature,  $T_B$ . [4]  
(iii) Estimate the temperature at which oxygen behaves as an ideal gas,  $T_B$  given the constants:  $\alpha=1.748 \text{ L}^2\text{atm mol}^{-2}\text{K}$  and  $\beta=0.0345 \text{ L mol}^{-1}$ . [2]  
(iv) Estimate the radii of real gas molecules using equation (1) for real gases given a critical molar volume of  $250 \text{ cm}^3\text{mol}^{-1}$  [4]
- b) Using the critical point expressions for  $V_{m,c}$ ,  $T_c$  and  $P_c$  find an expression or value for compressibility at the critical point,  $Z_c$  [3]

**Question 3 [25 Marks]**

- a) Write short notes on the following

- i) enthalpy change [5]  
ii) Hess's Law [5]

- b) Derive Kirrchoff's equation: [6]

$$\Delta H_r(T_2) = \Delta H_r(T_1) + \Delta_r C_{p,m} \Delta T$$

where  $C_{p,m}$  is temperature independent.

- b) Using the data in the table below calculate

- i)  $\Delta_r H^\theta$  at 298 K [4]  
ii)  $\Delta_r H$  at 346 K [5]

for the hydrogenation reaction:

	$\text{C}_2\text{H}_4(\text{g})$	$\text{H}_2(\text{g})$	$\text{C}_2\text{H}_2(\text{g})$
$C_{p,m} \text{ J/mol/K}$	43.56	43.93	28.82
$\Delta_f H^\theta \text{ kJ/mol}$	+52.30	0	+226.8

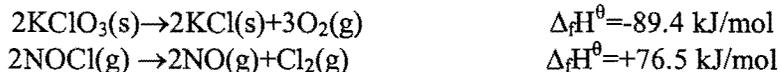

**Question 4 [25 Marks]**

- a) Using examples and/or diagrams compare and contrast any one pair of the following terms
- reversible and irreversible expansion [10]
  - path and state functions [10]
- b) 4 moles of pentane occupies 25 L at 315 K.
- Derive an expression for reversible isothermal expansion. [6]
  - Calculate the work done and heat involved when the gas expands isothermally against a constant external pressure of 115 torr until its volume has doubled. [4]
  - Calculate the efficiency of the system in 1 b (ii) above. [5]

**Question 5 [25 Marks]**

- a) Define internal energy change [10]
- b) To Calibrate a calorimeter a 0.120 g naphthalene,  $C_{10}H_8(s)$ , was burnt at constant volume and it caused the temperature of the calorimeter to rise by 3.05 K. Then 0.10 g of an unknown compound was burned in the same calorimeter, causing a temperature rise of 2.05 K.
- Calculate the heat capacity of the calorimeter [3]
  - Is the unknown compound phenol,  $C_6H_5OH(s)$  or ethanol,  $CH_3CH_2OH(l)$  whose enthalpies of combustion are  $\Delta_c H^\theta = -3054 \text{ kJmol}^{-1}$  and  $-1368 \text{ kJmol}^{-1}$  respectively. [4]
- c) Calculate the standard enthalpies of formation of:
- $KClO_3(s)$  from the enthalpy of formation of  $KCl$  [4]
  - $NOCl(g)$  from the enthalpy of formation of  $NO$  [4]

Given the attached table and the following information:

Useful information:

	Molecular weights/ $\text{g mol}^{-1}$
Benzoic acid	122.12
D-ribose $C_5H_{10}O_5 (s)$	150.13

**QUESTION 6 [25 MARKS]**

- a) Write short notes on any Two of the following: [10]
- Eutectic temperature and Congruent melting point
  - Zeotrope and Azeotrope
  - Lower consolute and upper consolute temperature

- b) a) Draw a sketch of the phase diagram of carbon dioxide and explain briefly the slopes and curvature of the liquid-solid and the liquid-gas boundaries, respectively. [5]
- c) i) Derive the Clausius-Clapeyron equation for evaporation in the form  
$$\frac{d(\ln p)}{dT} \cdot [5]$$
- ii) The triple point of benzene is at 5.5°C and 36 mm Hg. Predict the boiling point of benzene at 0.1 atm pressure. [5]
-
