

**UNIVERSITY OF SWAZILAND**  
**SUPPLEMENTARY EXAMINATION**  
**ACADEMIC YEAR 2013/2014**

---

**TITLE OF PAPER:**            **ADVANCED**                    **INORGANIC**  
   **CHEMISTRY**  
**COURSE NUMBER:**        **C401**

**TIME ALLOWED:**            **THREE (3) HOURS**

**INSTRUCTIONS:**            **THERE ARE SIX (6) QUESTIONS.**  
   **ANSWER ANY FOUR (4) QUESTIONS.**  
   **EACH QUESTION IS WORTH 25**  
   **MARKS.**

---

**A PERIODIC TABLE HAS BEEN PROVIDED WITH THIS EXAMINATION PAPER.**

**PLEASE DO NOT OPEN THIS PAPER UNTIL AUTHORISED TO DO SO BY THE CHIEF INVIGILATOR.**

## QUESTION ONE

- (a) Write the formulae of the following compounds:  
(i) Dicarbonyl- $\eta^5$ -cyclopentadienyl- $\eta^1$ -cyclopentadienyliron(II).  
(ii) Dichlorobis( $\eta^5$ -cyclopentadienyl)titanium(IV). [4]
- (b) (i) Describe the 18-electron rule and explain its basis.  
(ii) Define a metal cluster.  
(iii) Give the electron count for each of the following species, and determine which of them obey the 18-electron rule:  
(1) Heptahaptocycloheptatrienyltricarbonylmolybdenum(I). [8]  
(2)  $(\text{CO})\text{Os}(\equiv\text{CPh})(\text{PPh}_3)_2\text{Cl}$
- (c) Explain why  $\text{V}(\text{CO})_6$  is easily reduced to the monoanion. [4]
- (d) (i) Considering the bonding in metal carbonyls, what factors would affect the C–O stretching vibrations?  
(ii) A carbonyl complex has linear OC-M-CO group. How will the CO stretching frequency change (increase, decrease or remain the same) under the following conditions? Justify your answers.  
(1) One CO is replaced by triethylamine,  $(\text{CH}_3\text{CH}_2)_3\text{N}$ :  
(2) The complex acquires a positive charge  
(3) The complex acquires a negative charge [9]

## QUESTION TWO

- (a) Explain, with necessary orbital diagrams, how carbon monoxide, CO, which has negligible donor properties toward simple acceptors such as  $\text{BF}_3$ , can form strong bonds to transition metal atoms. [8]
- (b) Based on isolobal analogies, choose the organometallic fragments that might replace  
(i)  $\text{CH}_2^+$   $\text{Fe}(\text{CO})_4$ ,  $\text{Mn}(\text{CO})_5$ , or  $\text{Re}(\text{CO})_4$   
(ii)  $\text{CH}^-$   $\text{Ni}(\text{CO})_3$ ,  $\text{Co}(\text{CO})_3$ , or  $\text{Mn}(\text{CO})_4$   
(iii)  $\text{CH}_3$   $\text{CpCo}(\text{CO})$ ,  $\text{Mn}(\text{CO})_5$ , or  $\text{Cr}(\text{CO})_6$  [3]
- (c) (i) Classify each of the following as closo, nido or arachno:  
(1)  $\text{Rh}_6(\text{CO})_{16}$  (2)  $\text{Os}_5\text{C}(\text{CO})_{15}$   
(ii) Describe the structures of the above species. [8]
- (d) Predict the transition metal-containing products of the following reactions:  
(i)  $\text{Mo}(\text{CO})_6 + \text{Ph}_2\text{P}-\text{CH}_2-\text{PPh}_2 \rightarrow$   
(ii)  $\text{H}_3\text{C}-\text{Mn}(\text{CO})_5 + \text{SO}_2 \rightarrow$  (no gases are evolved)  
(iii)  $\text{Rh}(\text{CO})_3\text{Br} + \text{H}_2 \rightarrow$  [6]

### QUESTION THREE

- (a) Discuss briefly the two types of insertion reactions encountered in homogeneous catalysis. [6]
- (b) Explain the following observations:  
(i) The ligand CO can be replaced from  $\text{Ni}(\text{CO})_4$  by  $\text{PF}_3$  or  $\text{SbCl}_3$ , but no reaction occurs with  $\text{PF}_5$  or  $\text{SbCl}_5$ .  
(ii) The ligand cyclohepta-1,3,5-triene is hexahapto when bonded to the  $\text{Cr}(\text{CO})_3$  fragment, but only tetrahapto when bonded to the  $\text{Fe}(\text{CO})_3$  fragment. [6]
- (c) Outline the mechanism for the alkene hydrogenation using  $\text{RhCl}(\text{PPh}_3)_3$  as the catalyst. [13]

### QUESTION FOUR

- (a) Give two separation methods that can produce the pure elements with little contamination from the other lanthanides. Describe one in detail. [6]
- (b) An empty, a half-filled and a completely filled 4f electronic level is often said to confer stability on the oxidation state of a lanthanide ion. Cite examples which bear out this statement. [3]
- (c) (i) Which actinide element has the most stable +2 oxidation state?  
(ii) Which actinide element forms a +3 ion with 7 electrons in the 5f orbital?  
(iii) Name one actinide element that forms compounds in the +7 oxidation state. [3]
- (d) (i) Determine the number of unpaired electrons in  $\text{Er}^{3+}$ .  
(ii) Derive the ground state-term symbol for  $\text{Er}^{3+}$ , and calculate its magnetic moment.  
(iii) Write the formula of one lanthanide metal ion whose magnetic moment can be calculated by the spin-only formula. [6]
- (e) (i) Which actinide isotope(s) is/are obtained in macroscopic amounts?  
(ii) What are the main principles upon which the separation of Np, Pu and Am from U are made? [7]

### QUESTION FIVE

- (a) Describe the main types of interhalogen compounds giving examples of each. [6]
- (b) Predict the products of the following reactions of interhalogens:
- (i)  $\text{ICl} + \text{KI} \rightarrow$
  - (ii)  $\text{ClF}_3 + \text{SbF}_5 \rightarrow$
  - (iii)  $\text{IF}_5 + \text{CsF} \rightarrow$  [3]
- (c) Based on the analogy between halogens and pseudohalogens, write the balanced equation for the probable reaction of
- (i) cyanogens,  $(\text{CN})_2$  with aqueous hydroxide.
  - (ii) cyanide ion,  $(\text{CN}^-)$  with lead ion,  $(\text{Pb}^{2+})$ . [2]
- (d) Draw the structure and write an equation for the preparation for each of the following compounds:
- (i)  $\text{I}_3^+$
  - (ii)  $\text{BrF}_5$  [10]
- (e) The interhalogen,  $\text{I}_2\text{Cl}_6$  exists as a dimer in the solid state.
- (i) Write a balanced equation for the preparation of this compound.
  - (ii)  $\text{I}_2\text{Cl}_6$  undergoes dissociation on warming to room temperature. Write the reaction for the dissociation process. [4]

## QUESTION SIX

- (a) Name two common impurities in solvents and indicate how they can be removed. [4]
- (b) (i) Use the HSAB theory to predict which of the following pairs of adducts should be the more stable:  
(1)  $[\text{Fe}(\text{NMe}_3)_6]^{3+}$  or  $[\text{Fe}(\text{SbMe}_3)_6]^{3+}$   
(2)  $\text{BeI}_2$  or  $\text{BeF}_2$   
(ii) Select the best answer and give the basis for your selection.  
(1) Strongest acid:  $\text{H}_2\text{O}$ ,  $\text{H}_2\text{S}$ ,  $\text{H}_2\text{Se}$  or  $\text{H}_2\text{Te}$   
(2) Stronger base:  $\text{NF}_3$  or  $\text{NH}_3$  [8]
- (c) Consider each of the following solvents:  
(I) Ammonia,  $\text{NH}_3$  (II) Acetic acid,  $\text{CH}_3\text{COOH}$   
(III) Sulphuric acid,  $\text{H}_2\text{SO}_4$   
(i) Give equations for autoionisation of the pure solvents.  
(ii) Give appropriate equations to show what will happen if  $\text{CH}_3\text{COOH}$  is dissolved in  
(1)  $\text{NH}_3$   
(2)  $\text{H}_2\text{SO}_4$  [5]
- (d) (i) State the Bronsted-Lowry definition of acids and bases.  
(ii) State the Lewis definition of acids and bases and write two equations that illustrate it, including one that involves a protonic acid. [4]
- (e) Predict whether the equilibrium constants for the following reactions should be greater than 1 (reaction lies to the right) or less than 1 (reaction lies to the left):  
(i)  $\text{CdI}_2 + \text{CaF}_2 \rightleftharpoons \text{CdF}_2 + \text{CaI}_2$   
(ii)  $[\text{CuI}_4]^{2+} + [\text{CuCl}_4]^{3-} \rightleftharpoons [\text{CuCl}_4]^{2-} + [\text{CuI}_4]^{3-}$  [4]
