

UNIVERSITY OF SWAZILAND

**DEPARTMENT OF GEOGRAPHY, ENVIRONMENTAL SCIENCE AND
PLANNING**

SUPPLEMENTARY EXAMINATION PAPER – JULY, 2010

B.A., B.A.S.S., B. Ed., B. Sc.

TITLE OF PAPER: STATISTICAL GEOGRAPHY

COURSE NUMBER: GEP 223

TIME ALLOWED: THREE (3) HOURS

INSTRUCTIONS: 1. ANSWER THREE (3) QUESTIONS.

2. QUESTION 1 IS COMPULSORY.

3. CHOOSE TWO (2) QUESTIONS FROM SECTION B.

4. WHERE APPROPRIATE, ILLUSTRATE YOUR ANSWERS
BY EXAMPLES.

5. ALL WORKING AND/OR CALCULATIONS MUST BE
CLEARLY SHOWN.

6. YOU WILL BE PROVIDED WITH GRAPH PAPERS AND
TABLES FOR CRITICAL VALUES AND SIGNIFICANCE
LEVELS.

MARK ALLOCATION: QUESTION ONE (1) CARRIES FORTY (40) MARKS AND

THE OTHER QUESTIONS ARE THIRTY (30) MARKS
EACH.

THIS PAPER IS NOT TO BE OPENED UNTIL PERMISSION HAS BEEN GRANTED
BY THE INVIGILATOR

GEP 223: STATISTICAL GEOGRAPHY – JULY, 2010**SECTION A: COMPULSORY QUESTION****QUESTION 1**

Table 1 shows maize yields from different farm sizes of some households in Ntandozi area.

- (a) Calculate the Spearman's Correlation coefficient between maize yields and size of the farms. (20 marks)
 - (b) Plot a scatter-gram and a regression line of the distribution of households in relation their farm sizes and maize yields obtained. (10 marks)
 - (c) Test the correlation coefficient at 0.05 significance level. (10 marks)
- [40 Marks]**

SECTION B: ANSWER ANY TWO QUESTIONS**QUESTION 2**

- (a) Explain the main steps involved in the scientific approach in analyzing geographical problems. (14 marks)
 - (b) Outline the functions of statistical techniques. (10 marks)
 - (c) Indicate situations where the following statistical tests can be used.
 - (i) Standard deviation. (2 marks)
 - (ii) The student t-test. (2 marks)
 - (iii) The Chi-Square test. (2 marks)
- [30 Marks]**

QUESTION 3

Using data matrix (Table 2):

- (a) Calculate the standard deviation of the percentage of working males in social classes I and II for the first twenty (20) towns. (10 marks)
 - (b) Calculate the skewness of variable E (Children in care of local authority as a percentage of all children under 18). (15 marks)
 - (c) Explain the meaning of the skewness measure obtained in (b) above. (5 marks)
- [30 Marks]**

QUESTION 4

Data presented in Table 3 shows hypothetical sizes of chiefdoms (A to E) and the number of homesteads with above 70% income generation from livestock. Use a chi-square test to establish whether or not the observed distribution in this data set is a result of random variations.

[30 marks]**QUESTION 5**

Using data provided on Table 4:

(a) Plot a line graph showing the production of cotton lint from 1951 to 1985.

(10 marks)

(b) Calculate five (5) year running means for cotton lint production.

(10 marks)

(c) Using the same graph in (a) above, plot another line graph using the 5 year running means calculated in (b) above.

(10 marks)

[30 Marks]

Table 1: The distribution of maize yields and farm sizes of some households in Ntandozi

H/H No.	Maize yields in bags	Farm size in (ha)
1	80	121
2	29	68
3	61	49
4	92	154
5	01	62
6	42	62
7	88	140
8	23	30
9	74	88
10	67	67
11	88	39
12	19	12
13	01	07
14	76	28
15	87	134
16	16	20
17	48	90
18	10	06
19	12	19
20	10	51
21	71	134
22	04	12
23	62	120
24	80	66
25	05	19

Table 2: Data Matrix

INDIVIDUALS	VARIABLES					
	A	B	C	D	E	F
1. Basildon	20.38	8.3	***	***	***	1.06
2. Birkenhead	12.70	6.9	5.5	8.14	1.96	0.68
3. Birmingham	12.70	7.8	10.7	2.34	0.00	0.64
4. Blackpool	19.56	11.9	5.5	3.96	0.00	0.45
5. Bolton	14.14	7.5	8.0	3.12	0.00	0.53
6. Bournemouth	23.85	14.1	10.0	2.76	3.62	0.97
7. Bradford	13.67	8.9	11.9	6.78	0.00	0.41
8. Brighton	20.33	11.4	9.9	3.69	0.00	0.61
9. Bristol	14.13	7.9	10.0	10.60	28.40	0.99
10. Cardiff	13.36	9.9	6.8	5.57	37.73	0.85
11. Coventry	9.46	6.4	6.5	3.09	4.41	0.74
