

**UNIVERSITY OF SWAZILAND**

**SUPPLEMENTARY EXAMINATION PAPER 2009**

**TITLE OF PAPER** : DESCRIPTIVE AND INFERENTIAL STATISTICS

**COURSE CODE** : ST230/IDEST 230(1&2)

**TIME ALLOWED** : 3 (THREE) HOURS

**REQUIREMENTS** : STATISTICAL TABLES AND CALCULATOR

**INSTRUCTIONS** : ANSWER ALL QUESTIONS IN SECTION ONE, ANY TWO FROM SECTION TWO, AND ANY TWO FROM SECTION THREE. ALL QUESTIONS CARRY MARKS INDICATED IN PARENTHESIS

**THIS PAPER IS NOT TO BE OPENED UNTIL PERMISSION HAS  
BEEN GRANTED BY THE INVIGILATOR**

## SECTION ONE

### QUESTION ONE

[10 marks, 1 point each]

- 1) Gender is usually operationalized as:
  - a) nominal/categorical data
  - b) ordinal data
  - c) interval data
  - d) ratio data
- 2) Results obtained from a sample population:
  - a) Should be generalizable to the target population
  - b) Are identical to those in the target population
  - c) Are usually non-representative
  - d) Are only obtained in quasi-experiments
- 3) The alternative hypothesis for the Chi-square test of independence is that the variables are
  - a) dependent
  - b) related
  - c) independent
  - d) always zero
- 4) If the mean is smaller than the median, the skewness would be:
  - a) Positive
  - b) Negative
  - c) Zero
  - d) Irrelevant
  - e) Can't tell
- 5) The grades on exam C are normally distributed with a population mean of 75% and a population standard deviation of 5%. Select the best statement:
  - a) The 95% confidence interval on the exam C distribution extends from 65% to 85%.
  - b) 34% of the grades on exam C are between 75% and 80%.
  - c) 65% of the grades on exam C are between 65% and 85%.
  - d) The area under the entire curve of exam C grades could be less than 100%.
- 6) 95% of the grades on exam C are between 75% and 85%. The standard error of the mean is:  
(Select the best statement.)
  - a) used to calculate the mean of the sample.
  - b) used whenever the researcher wants to adjust for confounding by the direct or indirect standardization method.
  - c) the sample size divided by the square root of the sample standard deviation.
  - d) a type of sampling bias that can lead to an erroneous study conclusion.
  - e) the standard deviation of the distribution of sample means.
- 7) Select the best statement concerning the Pearson's correlation coefficient:
  - a) It is an approximation of the mean of two variables.
  - b) It reflects the magnitude of the association for linear and non-linear relationships between two continuous variables.
  - c) A Pearson's correlation coefficient of zero indicates there is no linear association between the two variables.
  - d) A Pearson's correlation coefficient of positive one indicates there is no linear association between the two variables.
  - e) A Pearson's correlation coefficient of negative one indicates there is a non-linear relationship between the two variables.

- 8) The square of the correlation coefficient or  $r^2$ ; is called the  
a) coefficient of determination  
b) variance  
c) covariance  
d) coefficient of discontent  
e) Big R
- 9) A recent survey found that 50% of American households are connected to the internet. If we randomly select 4 households what is the probability that all of them are connected?  
a) 0.5  
b) 0.25  
c) 0.10  
d) 0.0625.  
e) None of the above
- 10) If I play a slot machine 50 times and the probability that I win on any given attempt is 0.01, what is the probability that I win on at least one attempt?  
a) 0.5  
b) 0.395  
c) 0.605  
d) 0.2  
e) None of the above.

**QUESTION TWO**

[10 marks, 1 point each]

Indicate whether the sentence or statement is TRUE or FALSE.

- 1) If the exam scores are normally distributed with a mean of 85 and a standard deviation of 5 then about 5% of the class must have scored above 95.
- 2) Consider tossing a fair coin 100 times and getting heads on every single toss. The probability of a tail on the 101st toss must be higher than 50%.
- 3) The smaller the p-value, the less likely you are to reject the null hypothesis.
- 4) The coefficient of correlation is a useful measure of the linear relationship between two variables.
- 5) A Poisson experiment has a fixed number of trials.
- 6) The mode will always have a unique value.
- 7) Another name for the ogive is a frequency polygon.
- 8) If A and B denote are not mutually exclusive,  $P(A \cap B) = P(A) \times P(B)$ .
- 9) In a Poisson distribution, the mean equals the variance.
- 10) The standard normal distribution has a mean of one.

## SECTION TWO

### **QUESTION THREE**

[20 marks, 8+4+4+4]

- a. With which characteristic movement (component) of a time series would you mainly associate with each of the following?
- (i) the decline in the number of people dying from AIDS due to advances in science;
  - (ii) a continually increasing demand for smaller cars;
  - (iii) a two weeks general strike by workers in the textile industry;
  - (iv) an increase in employment in December;
  - (v) the monthly number of inches of rainfall in a city over a 5 year period;
  - (vi) a fire in a factory delaying production for three weeks;
  - (vii) an after Easter sale in a department store; and
  - (viii) a recession.
- b.
- (i) The electricity tariff has increased by 12 percent, 8 percent and 16 percent per annum over a three-year period. Find the average annual increase in tariff.
  - (ii) If a cyclist travels 50km/hour over a stretch of road, and 30km/hour over another hilly 5km stretch of road, find the average speed over the 10 km distance.
  - (iii) A training consultant is paid £150 per hour for one 8 hour training programme; £120 per hour on second training programme of 6 hours and £200 for a 2 hour seminar. What is his average earnings per hour over the three engagements?

**QUESTION FOUR**

[20 marks, 4+4+4+4+4]

Here is a grouped frequency distribution of ideal family sizes (the number of children desired) reported by respondents in a demographic survey:

Ideal Number	Frequency
0	16
1	26
2	752
3	353
4	196
5	34
6	14
7	8

Compute the following measures: mean, median, standard deviation, coefficient of skewness and coefficient of variation. Interpret your results.

**QUESTION FIVE**

[20 marks, 10+3+4+3]

a. The marketing manager of "XYZ Videos" wants to assess the competitiveness of the company's products in the market. He has the following information on prices and quantities on videos sold in January 2000 and January 2005.

Length of Videos	2000		2005	
	Price	Quantity	Price	Quantity
90 minutes	4.00	32	5.60	40
120 minutes	4.30	150	6.15	190
180 minutes	4.60	100	7.40	130

Compute Fisher's price index for 2005 and interpret it.

- b. A fishery expert found the following concentrations of mercury, in parts per million, in 32 fish caught in a certain stream:

0.045	0.063	0.049	0.062	0.065	0.054	0.050	0.048
0.072	0.060	0.062	0.054	0.049	0.055	0.058	0.067
0.055	0.058	0.061	0.047	0.063	0.068	0.056	0.057
0.072	0.052	0.058	0.046	0.052	0.075	0.066	0.054

Compute the mean, median, and mode.

## SECTION THREE

### QUESTION SIX

[20 marks, 2+8+8+2]

An economist wants to estimate the relationship between the annual income of families and their annual savings. The following data are obtained:

Annual income (thousands of Emalangeni)	Annual saving (thousands of Emalangeni)
12	0.0
13	0.1
14	0.2
15	0.2
16	0.5
17	0.5
18	0.6
19	0.7
20	0.8

- Identify the dependent variable (y) and independent variable (x).
- Find the best fitting regression equation of the form  $y=a+bx$ .
- Test whether there is a significant relationship between annual income and annual savings at the 0.01 level of significance.
- Use the equation obtained in b) to predict the annual savings of a family whose annual income is E26,000.

### QUESTION SEVEN

[20 marks, 12+8]

- A statistics lecturer has two graduate assistants helping her with her research. The probability that the older of the two will be absent on any given day is 0.08, the probability that the younger of the two will be absent on any given day is 0.06, and the probability that they will both be absent on any given day is 0.02. Find the probabilities that:

- either or both of the graduate assistants will be absent on any given day;
  - at least one of the two graduate assistants will not be absent on any given day;
  - only one of the two assistants will be absent on any given day.
- 
- The probability that a plane from Johannesburg to Matsapha will leave on time is 0.80, and the probability that it will leave on time and also arrive on time is 0.72.
    - What is the probability that if such a plane leaves on time it will also arrive on time?
    - If the probability is 0.75 that such a plane will arrive on time, what is the probability that if such a plane does not leave on time it will nevertheless arrive on time?

**QUESTION EIGHT**

[20 marks, 4+5+6+5]

- a) A medical doctor knows from experience that 10 percent of her patients are late for their appointments. Find the probability that two of five randomly selected patients are late for their appointments.
- b) When playing a football game, the probability that a certain player will complete a pass is 0.60. What is the probability that this player will complete a pass for the first time on the third attempt?
- c) A wholesaler has an inventory of 100 individually boxed portable radios which he believes to be black but 5 of which are white. If 3 of these radios are randomly selected and shipped to a customer, find the probability that the customer will receive exactly 1 white radio.
- d) A mail-order firm knows from experience that 2.8 percent of its sales are exchanged by customers because they ordered the wrong size or colour, changed their minds, and so forth. Use the Poisson approximation to the binomial to determine the probability that among 225 orders, 6 will be exchanged.

Table 1. Binomial Probabilities

Table 1 lists values of  $P(Y \leq y)$  =  $\sum_{i=1}^y F_i(y)$  for  $y = 0, 1, 2, \dots, 10$ .

(a) $n = 5$												
$a$	$P$											
	0.01	0.05	0.10	0.20	0.30	0.40	0.50	0.60	0.70	0.80	0.90	0.95
0	.951	.774	.590	.328	.168	.078	.031	.010	.002	.000	.000	.000
1	.999	.977	.919	.737	.528	.337	.188	.087	.031	.007	.000	.000
2	1.000	.999	.991	.942	.837	.683	.500	.317	.163	.058	.009	.001
