# UNIVERSITY OF SWAZILAND

### **SUPPLEMENTARY EXAMINATION PAPER 2011**

TITLE OF PAPER : INFERENTIAL STATISTICS

COURSE CODE : ST 220

TIME ALLOWED : TWO (2) HOURS

REQUIREMENTS : CALCULATOR AND STATISTICAL TABLES

INSTRUCTIONS : THIS PAPER HAS SIX (6) QUESTIONS AND

TWO SECTIONS. ANSWER ALL QUESTIONS IN SECTION ONE, ANY THREE (3) QUESTIONS IN

**SECTION TWO** 

### **SECTION ONE**

## (ANSWER ALL QUESTIONS)

### Question 1

# [10 marks, 1 mark each]

Choose the correct answer from the alternatives provided.

- 1. Which of the following is not a property of the normal distribution?
  - (a) It is symmetric about its mean
  - (b) It is bell-shaped
  - (c) It is common
  - (d) It is unimodal
- 2. The government claims that students earn an average of SZL4500 during their summer break from studies. A random sample of students gave a sample average of SZL3975 and a 95% confidence interval was found to be (SZL3525  $< \mu <$  SZL4425). This interval is interpreted to mean that:
  - (a) if the study were to be repeated many times, there is a 95% probability that the true average summer earnings is not SZL4500 as the government claims.
  - (b) because our specific confidence interval does not contain the value SZL4500 there is a 95% probability that the true average summer earnings is not SZL4500.
  - (c) if we were to repeat our survey many times, then about 95% of all the confidence intervals will contain the value SZL4500.
  - (d) if we repeat our survey many times, then about 95% of our confidence intervals will contain the true value of the average earnings of students.
  - (e) there is a 95% probability that the true average earnings are between SZL3525 and SZL4425 for all students.
- 3. Which of the following statements about confidence intervals is incorrect?
  - (a) If we keep the sample size fixed, the confidence interval gets wider as we increase the confidence coefficient.
  - (b) A confidence interval for a mean always contains the sample mean.
  - (c) If we keep the confidence coefficient fixed, the confidence interval gets narrower as we increase the sample size.
  - (d) If the population standard deviation increases, the confidence interval decreases in width.
  - (e) If the confidence intervals for two means do not overlap very much, there is evidence that the two population means are different.
- 4. A 95 percent confidence interval for the mean time taken to process new insurance policies is (11, 12) days. This interval can be interpreted to mean that:
  - (a) only 5 percent of all policies take less than 11 or more than 12 days to process
  - (b) only 5 percent of all policies take between 11 and 12 days to process

- (c) about 95 out of every 100 such intervals constructed from random samples of the same size will contain the population mean processing time
- (d) the probability is .95 that all policies take between 11 and 12 days to process
- (e) none of the above
- 5. A turkey producer knows from previous experience that profits are maximized by selling turkeys when their average weight is 12 kilograms. Before determining whether to put all their full grown turkeys on the market this month, the producer wishes to estimate their mean weight. Prior knowledge indicates that turkey weights have a standard deviation of around 1.5 kilograms. The number of turkeys that must be sampled in order to estimate their true mean weight to within 0.5 kilograms with 95% confidence is:
  - (a) 35
  - (b) 5
  - (c) 65
  - (d) 10
  - (e) 150
- 6. A confidence statement includes what two things?
  - (a) margin of error and bias
  - (b) bias and variability
  - (c) bias and confidence level
  - (d) confidence level and margin of error
- 7. I read an advertisement recently in which a credit card company promised that I could reduce my debt by 150 percent. Which of the following statements is (are) true?
  - (a) This is possible if my debt is more than 150 dollars.
  - (b) This is possible if my debt has recently increased by at least 150 percent.
  - (c) The company's claim makes no sense.
  - (d) Both (a) and (b).
- 8. The alternative hypothesis for the Chi-square test of independence is that the variables are
  - (a) dependent
  - (b) related
  - (c) independent
  - (d) always zero
- 9. The diameter of ball bearings are known to be normally distributed with unknown mean and variance. A random sample of size 25 gave a mean 2.5 cm. The 95% confidence interval had length 4 cm. Then
  - (a) The sample variance is 4.86.
  - (b) The sample variance is 26.03.

- (c) The population variance is 4.84.
- (d) The population variance is 23.47.
- (e) The sample variance is 23.47.
- 10. The 0.01 level of significance is used in an experiment and a two-tailed hypothesis test applied. Computed z is found to be -2.0. This indicates:
  - (a)  $H_0$  should be accepted
  - (b) We should reject  $H_0$  and accept  $H_1$
  - (c) We should have used the 0.05 level of significance.
  - (d) None of these is correct.

### Question 2

# [5 marks, 1 mark each]

State whether each of these statements is true or false, giving brief reasons why this is so (*Note that no marks will be awarded for a simple true/false reply*)

- When using a large random sample, we cannot assume that its mean forms part of a normal distribution.
- 2. The least squares regression line minimizes the sum of absolute deviations.
- 3. The power of a test is the probability of a type 2 error.
- 4. If two variables are correlated then they must have a linear relationship.
- 5. The sampling distribution of the mean is distributed the same way as the original observations.

### **SECTION TWO**

## (ANSWER ANY THREE QUESTIONS)

### Question 3

# [20 marks, 6+4+6+4]

(a) Music Technologies, an electronics retail company in Durban has kept records of the number of ipods sold within a week of placing advertisements in the *Mercury*. The following table shows the *number of ipods sold* and the corresponding *number of advertisements placed* in the *Mercury* for 12 randomly selected weeks over the past year.

Ads	4	4	3	2	5	2	4	3	5	5	3	4
Sales	26	28	24	18	35	24	36	25	31	37	30	32

- (i) Estimate the linear regression line ( $\sum x^2 = 174$ ,  $\sum xy = 1324$  and  $\sum y^2 = 10336$ ).
- (ii) Compute and interpret the coefficient of determination.
- (iii) Is the relationship between the number of newspaper advertisements placed and ipod sales meaningful (or significant)? Use  $\alpha = 0.05$ .
- (b) Every morning, Duncan bakes 30 scones to sell in his cafe'. If any scones are unsold at the end of the day, Duncan throws them away. The number of scones requested during a day may be modelled by a Poisson distribution with mean 27. Estimate the probability that Duncan does not have enough scones to satisfy all the requests on a particular day (*Use normal approximation to the Poisson distribution*).

### Question 4

# [20 marks, 8+8+4]

(a) It is suspected that the number of faulty products produced by a manufacturing industry varies depending on which day of the week they were made. In order to test this a random sample of 200 products is taken from the warehouse, and after inspection yields the following results.

		Day of manufacture	
Product	Monday	Tuesday-Thursday	Friday
Perfect	32	94	34
<b>Faulty</b>	3	21	16

Use the  $\chi^2$  test to decide if these results indicate that there is a connection between faulty products and when they were made.

(b) The production manager of Raylite batteries, a car battery manufacturer, wants to know whether the three machines used for this process (labelled A, B and C) produce equal amount of rejects. A random sample of shifts for each machine was selected and the number of rejects produced per shift was recorded.

Machine A	Machine B	Machine C
11	7	14
9	10	13
6	8	11
12	13	16
14		16
11		

Can the production manager of Raylite batteries concluded that the three machines used to manufacture car batteries produce rejects at the same average rate per shift (NB:  $SS_T=129.6$ ). Use  $\alpha=0.05$  and show the ANOVA table.

### Question 5

# [20 marks, 8+7+5]

(a) In a study of the effectiveness of physical exercise in weigh reduction, a group of 16 persons engaged in a prescribed program of physical exercise for one month showed the following results:

4 - Additional and Additional Add	Weight before	Weight after
Subject	(pounds)	(pounds)
1	209	196
2	178	171
3	169	170
4	212	207
5	180	177
6	192	190
7	158	159
8	180	180

Use the 0.01 level of significance to test the null hypothesis that the prescribed program of exercise is not effective in reducing weight.

- (b) The manager of a power tool rental company wants to know whether the true average number of power tools rented per day is 25.0. If in a random sample of 36 days the average number of power tools rented is 22.8 with a standard deviation of 6.9 rentals, is there, at the 0.05 level of significance, sufficient evidence to reject the null hypothesis  $\mu = 25.0$ ?
- (c) A crossword puzzle enthusiast has exactly 30 minutes to complete a puzzle each day during her morning to commute on the train. She knows from experience that the puzzle published in newspaper A takes an average of 25.2 minutes to complete with a standard deviation of 3.9 minutes. The puzzle published in newspaper B also takes an average of 25.2 minutes but it has a standard deviation of 1.9 minutes. State with reason, which of these two newspapers should she buy in order to maximize her chances of completing the crossword puzzle.

### Question 6

# [20 marks, 10+4+6]

- (a) Ten randomly selected oil wells in a large field of oil wells produced 21, 19, 20, 22, 24, 21, 19, 22, 22, and 20 barrels of crude oil per day. Is this evidence at the 0.01 level of significance that the oil wells are not producing an average of 22.5 barrels of crude oil per day?
- (b) Suppose the probability is 0.30 that any given student in a large class can provide the answer to an assigned problem. What is the probability that the fourth student randomly selected by the instructor will be the first one who can provide the answer to the problem?
- (c) A careful analysis of the causes for absences in a certain factory shows that the probability that an employee will be absent because of substance abuse is 0.03; the probability that the factory manager correctly attributes the absence to substance abuse is 0.80, and the probability that the factor manager incorrectly attributes the absence of substance abuse is 0.05. What is the probability that an absence is attributed to substance abuse by the factory manager is actually due to substance abuse?

STATISTICAL TABLES

C. SCHOOLSKEENSTERNINGSPORTER CONTRACTOR

# TABLE A.1

Cumulative Standardized Normal Distribution

A(z) is the integral of the standardized normal distribution from  $-\infty$  to z (in other words, the area under the curve to the left of z). It gives the probability of a normal random variable not being more than z standard deviations above its mean. Values of z of particular importance:

	A(=)	0.9500	0.9750	0.9900	0.9950	06660	0.9995	
	h	1.645	1.960	2.326	2.576	3.090	3.291	
								ŀ¬

# Percentage Points of the t-Distribution

This table gives the percentage points  $t_{\nu}(P)$  for various values of P and degrees of freedom v. as indicated by the right.

The lower percentage points by symmetry as  $-t_{\nu}(P)$ , and the ive that  $|\ell| \ge t_{\nu}(P)$  is 2P/100. The limiting distribution of is the normal distribution with

and unit variance.

# Percentage Points of the $\chi^2$ -Distribution

This table gives the percentage points  $\chi_{\mu}^{\mu}(P)$  for various values of P and degrees of freedom  $\nu$ , as indicated by the figure to the right.

If X is a variable distributed as  $\chi^2$  with  $\nu$  degrees of freedom, P/100 is the probability that  $X > \chi_\nu^2(P)$ .

For  $\nu > 100$ ,  $\sqrt{2X}$  is approximately normally distributed with mean  $\sqrt{2\nu-1}$  and unit variance.

# 5 Percent Points of the F-Distribution

This table gives the percentage points  $F_{\nu_1,\nu_2}(P)$  for P=0.05 and degrees of freedom  $P_{\nu_1,\nu_2}$ , as indicated by the figure to the right.

The lover percentage points, that is the values  $F_{\nu_1,\nu_2}(P)$  such that the probability that  $F < F_{\nu_1,\nu_2}(P)$  is equal to P/100, may be found using the formula

		2

 $F_{\nu_1,\nu_2}'(P) = 1/F_{\nu_1,\nu_2}(P)$
