

UNIVERSITY OF SWAZILAND

RE-SIT EXAMINATION PAPER 2018

TITLE OF PAPER : QUANTITATIVE METHODS IN DEMOGRAPHY

COURSE CODE : DEM 214

TIME ALLOWED : TWO (2) HOURS

INSTRUCTIONS : ANSWER ANY THREE QUESTIONS.

MARKS ALLOCATION : ALL QUESTIONS CARRY 20 MARKS

**REQUIREMENTS : SCIENTIFIC CALCULATOR AND
STATISTICAL TABLES.**

Question 1

- a. Differentiate between probability and non- probability sampling [5 marks]
- b. A doctor believes that the proportions of births in this country on each day of the week are equal. A simple random sample of 700 births from a recent year is selected, and the results are below. At a significance level of 0.01, is there enough evidence to support the doctor's claim? [5 marks]

Day	Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
Frequency	65	103	114	116	115	112	75

- c. A recent demographic survey in Swaziland revealed that about 22% of girls are pregnant before their 18th birthday. Using the binomial probability formula. Suppose that this survey included a random sample of 17 high school girls. Find the probability that:
- No girl will be pregnant before her 18th birthday. [2 marks]
 - Six or more girls will be pregnant before her 18th birthday. [5 marks]
 - More than two but less than four girls will be pregnant before her 18th birthday. [3 marks]

[20 marks]

Question 2

- a. At the beginning of an academic year, students studying Quantitative Research Methods in their final year at a certain university were split into two tutorial groups, Group A (7 students) and Group B (11 students), with different instructors for the two groups. They all took the same Quantitative Research Methods examination at the end of the year and achieved the percentage marks tabulated below, where the marks for each group have been sorted into increasing order.

Examination marks									
Group A	12	31	34	35	55	57	61		
Group B	36	39	46	48	58	66	69	70	77

Is there a significant evidence of a difference in the overall levels of performance between the two groups? State carefully your null and alternative hypotheses, carry out an appropriate test and use the 5% level of significance to draw conclusions.

[5 marks]

- b. With over 50% of adults spending more than an hour a day on the internet, the number experiencing computer-or internet-based crime continues to rise. A survey in 2010 of a random sample of 1025 adults, aged 18 and older, reached by random digit dialling found 113 adults in the sample who said that they or a household member had been the victim of a computer or internet crime on their home computer in the past year. Give the 99% confidence interval for the proportion p of all households that have experienced computer or internet crime during the year before the survey was conducted. [5 marks]
- c. The mean age at first marriage in Swaziland is assumed to be normally distributed with mean 21 years and variance 26. What is the probability that?
- A woman selected married before 20 years [2 marks]
 - Suppose that 23% of women in this sample are classified as having married late, what is the minimum age that woman has to be married to have married late? [5 marks]
 - Approximately what proportion of the women married years before the average. [3 marks]
- [20 marks]

Question 3

- a. A Binomial probability distribution $\text{BIN} \sim (10, 0.7)$ gave the probabilities given in the table below:

y	$P(y)$	$F(y)$
0	0.00001	0.00001
1	0.00014	0.00014
2	0.00145	0.00159
3	0.00900	0.01059
4	0.03676	0.04735
5	0.10292	0.15027
6	0.20012	0.35039
7	0.26683	0.61722
8	0.23347	0.85069
9	0.12106	0.97175
10	0.02825	1.00000

Calculate the following probabilities directly from the c.d.f.:

- $P(Y < 6)$ [2 marks]
- $P(3 < Y < 7)$ [2 marks]
- $P(5 < Y \leq 8)$ [2 marks]
- $P(Y \geq 4)$ [2 marks]
- $P(7)$ [2 marks]

- b. An immigration officer has been presented with a list of 24 persons coming into Swaziland through the Ngwenya border. Of the 24 immigrants, only 18 immigrants had the appropriate travel document. If the immigration officer decides to randomly select 4 persons for screening, what is the probability that:
- More than one, but less than 4 persons will have illegal travel documents? [2 marks]
 - More than 2 persons will have illegal travel documents [4 marks]
 - Three to four persons will have illegal travel documents [2 marks]
- c. Among UNISWA students who hold part-time jobs during the 2018 academic year, the distribution of the time spent working per week is approximate normally distributed with a mean of 20.20 hours and standard deviation of 2.60 hours. Find the probability that the average time spent working per week for 18 randomly selected students who hold part-time jobs during the year is not within 1 hour of the population mean. [2 marks]
- [20 marks]**

Question 4

- Define a test statistic [2 marks]
- What is a dependent variable and why is important in a demographic research? [3 marks]
- Define a Type I error [2 marks]
- Outline the **eight** steps for testing hypotheses [8 marks]
- A company wants to study the effect of instituting a mandatory ergonomics training programme. A random sample of the workers was drawn to observe the number of worker injuries reported before and after training. The data is presented in the table below. Has the training programme reduced the number of worker injuries? Test using a level of significance of 0.010.

Worker	1	2	3	4	5	6	7	8	9	10	11
Before	3	3	5	4	4	2	2	5	6	1	5
After	2	1	2	2	3	2	1	4	4	2	5

[5 marks]
[20 marks]

Standard Normal Probabilities

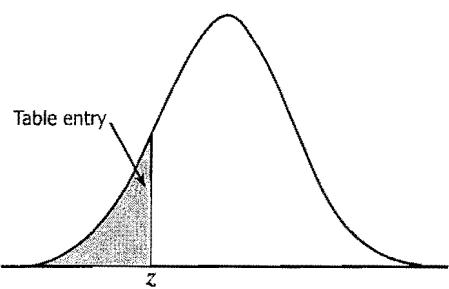

Table entry for z is the area under the standard normal curve to the left of z .
